

# THE SIDETRACKER ADVANTAGE

**ALL SIDETRACKERS ARE EXACTLY TAILORED TO THE APPLICATION, USING A MULTITUDE OF DIMENSIONAL VARIATIONS**

Tired of being told a fork lift truck is ideal for the application, because a standard model is all that is available?

Tired of being told 'take it or leave it', special designs are not available.

Each Sidetracker is dimensionally manufactured in our UK works to exactly match or improve the efficiency of a warehouse or production operation, whilst using common internal parts throughout.

Deck and fork length can be specified to exactly match the load depth of the stock being handled, essential in a guided installation, where the dimensions of the fork truck, load and racking need to match. Cab layouts, stand-on or seated can be designed to suit the operator exactly.

Wheels and tyres can be varied according to operating surfaces.
