

THE ST SIDETRACKER ADVANTAGE

SIDETRACKER ELECTRIC TRANSPORTATION PLATFORMS

Sidetracker is a full manufacturing and engineering company and as such we get involved in the manufacture of materials handling equipment beyond our traditional multi-directional fork lift truck range.

One of the areas we have been increasingly involved in is the production of electric transport platforms.

They are frequently used to move bulky and heavy items around production and warehouse areas. These platforms can be mounted on rails or free ranging, with the ability to turn 180° on the spot, and can be used inside and outside. Often they can

successfully link buildings or areas where cranes cannot function, and where the loads are too awkward or bulky for forklift trucks.

The handling of products such as press tools, heavy sheet materials, plant and equipment, coils etc, all lend themselves to this solution. Each platform is manufactured to customer specification.

Sidetracker offer a free consultancy service to advise if this type of material handling solution is relevant to your needs.
