

THE SIDETRACKER ADVANTAGE

ALL SIDETRACKERS ARE SUITABLE FOR OUTSIDE USE, ALL OF THE TIME

All Sidetrackers are suitable for outside usage due to their lack of electronics, and robust construction. Sidetrackers can be operated in water to a depth of 900 mm, let alone heavy rain or snow. In the unlikely event any part or all of the dashboard display did not work, the truck would remain fully operable.

If there are slopes on site we can fit a twin transmission to the 3-wheeled Sidetrackers, giving drive at the front

and rear of the truck to enable complete control on slopes even if the truck is stopped and restarted on the slope.

Sidetracker 4 wheeled trucks have articulating chassis to ensure 4 wheels are always on the ground even when the ground changes angle at the top and bottom of an incline. Rubber profiled tyres can also be fitted onto our 4-wheeled machines.
