

THE ST SIDETRACKER ADVANTAGE

FIT YOUR NEW STOCKHOLDING INTO YOUR EXISTING BUILDING!

Sidetracker multi-directional lift trucks can sometimes mean the difference between a costly premises move and retaining the existing building with more efficient usage of its volume.

It also means that if two sites need amalgamating into one, the extra space needed can often be created.

For example a steel stockholder in the North-East needed to close one site, yet wanted to transfer the stockholding of the closed

works, to another site. This stock consisted of long steel sections not previously stored at the new premises. Therefore a small section of the works had to be found to allow the new long lengths of steel be stored.

Sidetracker had the ability to fit the transferred stockholding into a confined area, using three cantilever racking runs, it needed an area with an overall width of just 8375mm including two aisles of 1625mm, for the whole stockholding to be stored.
